The Affordable Path to 120V Cooking

Introducing battery-free induction ranges with Plug & Cook convenience for fast & budget-friendly electrification

Introducing the Industry's Answer to Easy Electrification

Converting from gas to electric cooking has never been easier. With over 50 years of experience manufacturing appliances for apartment living, Summit is proud to bring new innovation to 120V cooking with the Wattsipper lineup. Our patent-pending technology lets you install a fully functional range without any major overhaul on your electrical setup. Simply plug the standard cord into your 120V outlet and enjoy an induction stovetop and full oven with bake, broil, & convection settings.

How Does It Work?

All you need is a 120V 20 amp outlet. Each Wattsipper range includes a standard NEMA 5-20P plug. How did we do it? Smart engineering with proprietary energy-saving components, dynamic power allocation, & superior insulation.

Low Conversion Cost

75% lower cost than battery ranges, and uses 85% less energy than gas or 240V electric for endless savings. Plus, no expensive conversion is needed to your building's electrical system.

Plug & Cook

Standard plug included for 120V outlets, ensuring fast and easy installation. Patent pending technology with no battery needed!

Serious Cooking Performance

Powerful cooktop + large oven allows you to bake, broil, air fry, & use convection to cook the perfect meal for family dining. Full-sized oven fits a full-sized turkey!

A Safer, Cleaner Kitchen

Clean air with no gas emissions or batteries to recycle, plus all the safety of induction sensor technology. All ranges are certified to UL-858 and FCC standards.
